

ConsumerVPN Client for iOS 12.0+

Getting Started Guide

1. Install the latest CocoaPods and run `pod install` from the root directory of the project
2. Open the build settings for the project
 - a. Change your Bundle Identifier to a unique value
 - b. Select your Signing Identity

3. Select “Build Phases”

- a. If you have a demo account, enter your username, password, and api key into the placeholder values.
- b. If you do not have a demo account yet, check the box “Run script only when installing”

4. Open the Theme.swift file and replace the following values:
 - a. productName
 - b. brandName
 - c. configurationName
 - d. forgotPasswordURL
 - e. contactSupportURL
 - f. usernameSuffix
 - g. apiKey
5. Customize the colors in Theme.swift
